(54) Title: PROFILED BAR WITH A RAISING MECHANISM FOR A WINDOW OR DOOR COVERING

(57) Abstract: A bar intended for fixing to the  
topside of a window or door comprises: a first  
cavity for accommodating a raising mechanism  
for raising cords for a covering for the window,  
which internal cavity is accessible from outside  
via holes in the bar for passage of a control cord  
and at least two cords which are connected for  
driving to the underside of the covering; a sec-  
ond cavity which extends in the longitudinal di-  
rection and which debouches via a constriction  
onto the outside of the bar, and serves to receive  
the upper edge of the covering which fits into the  
second cavity but is too wide to pass through the  
constriction; two profiles which together bound  
the first cavity, in at least one of which profiles  
said holes are present.
